The McDermott Digital Project Delivery Model

Enterprise 2.0. McDermott utilizes 3D model based end to end (E2E) integrated design-buy-build enterprise software to design, procure, fabricate and construct onshore and offshore facilities.

The **Gemini^{XD}** platform is built to coordinate the information, processes and people associated with the lifecycle of a project. Doing so results in fewer production errors, fewer cycle iterations and, ultimately, lower risk, increased speed to market, and higher margins.
